

Ideation Phase

Empathize & Discover

Date	02 October 2026
Team ID	6ab7f10630f9767f87728ca3
Project Name	Import Data Using Transform Maps (Spreadsheet)
Team Leader	E Dilli Kumar
Team Members	R Vinish, K Jerina, B Mohanavalli, P Sri Ragavan
Maximum Marks	4 Marks

Empathy Map Canvas

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes. It helps the team understand the true problem and the person experiencing it, considering their goals and challenges. Here, the user is a **System Administrator / Data Analyst** who needs to import spreadsheet data (Excel/CSV) into a ServiceNow table using an Import Set and Transform Map.

Example Persona: Data Administrator importing spreadsheet data

SAYS • "I have 5,000 rows in Excel – how do I get them into the table quickly?" • "Why did some records not get imported?" • "Can the columns be mapped automatically to the right fields?" • "I need to avoid creating duplicate records."	THINKS • Will wrong field mapping corrupt my existing data? • Is there an easier way than entering data manually? • What if the file format or column names don't match? • I hope the import finishes without errors.
DOES • Prepares and cleans the spreadsheet (.xlsx / .csv) • Loads data into an Import Set staging table • Creates a Transform Map and maps source to target fields • Runs the transform, checks logs and verifies imported records	FEELS • Anxious about data loss or incorrect mapping • Frustrated by repeated errors and rework • Confused by technical import terminology • Relieved and confident when data imports correctly
USER: Data Administrator / Analyst Goal: Import spreadsheet data accurately using Transform Maps	
PAINS • Manual entry is slow, repetitive and error-prone • Mismatched column names, data types and date formats • Duplicate or skipped records after the transform • Hard to understand error logs and ignored rows	GAINS • Fast, bulk import of data with minimal manual effort • Accurate field mapping with coalesce to prevent duplicates • Reusable Transform Maps for future imports • Clear import logs and reliable, clean data in the system

Key Insight

Users need a simple, reliable way to move spreadsheet data into the platform without manual entry. Using Import Sets with well-defined Transform Maps (field mapping, coalesce and transform scripts) reduces errors, saves time and ensures consistent, duplicate-free data.
