SCENARIO		Entice				Enter				Engage				Exit				Extend			
Importing spreadsheet data into ServiceNow using a Transform Map		How does someone initially become aware of this process?				What do people experience as they begin the process?				In the core moments in the process, what happens?				What do people typically experience as the process finishes?				What happens after the experience is over?			
Steps	What does the person (or group) typically experience?	Identify the need A user or admin has data in a spreadsheet (Excel/CSV) that must be loaded into ServiceNow.	Log in to instance User signs in to the ServiceNow instance with import/admin rights.	Open Load Data Navigates to System Import Sets > Load Data to start the import.	Review requirements Checks the target table, required fields, and column names in the spreadsheet.	Upload the file Chooses 'Create table' or existing table, selects the Excel/CSV file as data source.	Pick target table Names the staging (import set) table and the final target table.	Load the data Clicks Submit; rows load into the import set staging table.	Preview import set Opens the loaded import set and checks rows and columns are correct.	Create transform map Defines a Transform Map linking the source import set table to the target table.	Map the fields Uses Auto Map Matching Fields or maps source to target fields manually.	Set rules & scripts Sets coalesce fields, choice actions, and field/transform scripts if needed.	Run the transform Clicks 'Transform' and selects the transform map to move data to target table.	Review the results Opens Transform History / Import Log to see inserted, updated, and skipped rows.	Validate the records Opens the target table list and verifies the data is accurate and complete.	Fix errors & rerun Corrects mapping or source data issues, then re-runs the transform.	Confirm completion Import is signed off and the data is ready to use in the process.	Save & reuse the map Transform map is saved so it can be reused for future uploads of the same format.	Schedule imports Sets up a Scheduled Data Import for recurring spreadsheet loads.	Share knowledge Documents the steps and shares the template with teammates.	Monitor & improve Tracks import logs over time and refines maps to reduce errors.
		People: requester, admin, data owner. Things: spreadsheet file (.xlsx/.csv)	Places: ServiceNow login page. Things: browser, user credentials	Places: Application Navigator. Things: System Import Sets > Load Data module	Things: spreadsheet, target table schema / dictionary	Things: Load Data form, file chooser, Data Source record	Things: Import Set Table Name, Target Table fields	Things: Submit button, progress screen, import set record	Things: Import Set Rows list, Import Set record	Places: System Import Sets > Transform Maps. Things: Transform Map form	Things: Field Maps related list, Auto Map Matching Fields UI action	Things: Coalesce checkbox, Choice Action, Script editor	Things: Transform related link, Map selection dialog	Things: Transform History, Import Log, Import Set Run	Things: target table list view, filters, reports	People: admin, data owner. Things: Transform Map, corrected spreadsheet	People: requester, manager. Things: email / ticket update	Things: Transform Map record, update set	Things: Scheduled Data Import form, Data Source	People: teammates. Things: knowledge article, shared template file	Things: Import Sets list, Transform History dashboards
Goals & motivations	At each step, what is a person's primary goal or motivation? ("Help me..." or "Help me avoid...")	Help me get my spreadsheet data into ServiceNow quickly	Help me get access without hassle	Help me find the right import tool fast	Help me avoid missing columns or bad data later	Help me upload the file without format errors	Help me choose the correct tables	Help me know my data loaded fully	Help me spot data problems before transforming	Help me connect the source to the right target	Help me map fields correctly with less manual work	Help me avoid duplicate records	Help me move the data with confidence	Help me understand what succeeded and what failed	Help me trust the data is correct	Help me fix problems without starting over	Help me close this task and move on	Help me avoid rebuilding the map next time	Help me stop doing manual uploads	Help me teach others to do this	Help me keep imports reliable over time
Positive moments	What steps does a typical person find enjoyable, productive, fun, motivating, delightful, or exciting?	Load Data module is easy to find			Supports Excel and CSV files		Staging table protects live data until transform	Preview shows data before it hits the target	Auto Map matches same-named fields in a click		Coalesce prevents duplicates		Transform runs in seconds for small files	Transform History clearly shows inserted/updated rows	Seeing clean data in the target table feels rewarding	A saved map makes reuse easy		Scheduling saves repeated manual work			
Negative moments	What steps does a typical person find frustrating, confusing, angering, costly, or time-consuming?	Spreadsheet data is often messy or inconsistent			People forget to check required fields up front	Wrong file format or header issues cause errors				Many new users find transform maps confusing	Manual field mapping is time-consuming	Scripts and coalesce settings need technical skill		Error messages in logs are hard to understand	Skipped or ignored rows are hard to trace	Re-running can create duplicates if coalesce is wrong		Knowledge often stays with one person			
Areas of opportunity	How might we make each step better? What ideas do we have? What have others suggested?	Provide a downloadable spreadsheet template per table			Add a pre-import checklist for required fields	Validate headers and file type before upload				Suggest field mappings by name similarity		How might we explain coalesce in plain language?		Show clear, human-friendly error summaries	Add a one-click 'download failed rows' option	Add a dry-run / test import mode		Offer a library of reusable transform maps	Create short how-to guides or video walkthroughs	Send an email alert on import failures
