

Project Development Phase

Model Performance Test

Date	04 October 2026
Team ID	6ab7f10630f9767f87728ca3
Project Name	Import Data Using Transform Maps (Spreadsheet)
Team Leader	E Dilli Kumar
Team Members	R Vinish, K Jerina, B Mohanavalli, P Sri Ragavan
Maximum Marks	10 Marks

Model Performance Testing: Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Values	Screenshot																																		
1.	Metrics	Regression Model (numeric field check: value in the spreadsheet vs value stored in the target table, 20 sample values): MAE - 0.20, MSE - 0.30, RMSE - 0.55, R2 score - 1.0000 3 of 20 values differed by 1 to 2 units because of rounding / number-format issues. Classification Model (each of the 200 spreadsheet rows: should the row be imported or rejected, vs what the Transform Map actually did): Confusion Matrix - <table><tr><td></td><td>Pred. Imported</td><td>Pred. Rejected</td></tr><tr><td>Actual Valid</td><td>186</td><td>4</td></tr><tr><td>Actual Invalid</td><td>1</td><td>9</td></tr></table> Accuracy Score - 97.5% (195 of 200 rows handled correctly) Classification Report - <table><tr><td>Class</td><td>Precision</td><td>Recall</td><td>F1</td><td>Support</td></tr><tr><td>Imported</td><td>0.99</td><td>0.98</td><td>0.99</td><td>190</td></tr><tr><td>Rejected</td><td>0.69</td><td>0.90</td><td>0.78</td><td>10</td></tr><tr><td>Macro avg</td><td>0.84</td><td>0.94</td><td>0.88</td><td>200</td></tr><tr><td>Weighted avg</td><td>0.98</td><td>0.97</td><td>0.98</td><td>200</td></tr></table>		Pred. Imported	Pred. Rejected	Actual Valid	186	4	Actual Invalid	1	9	Class	Precision	Recall	F1	Support	Imported	0.99	0.98	0.99	190	Rejected	0.69	0.90	0.78	10	Macro avg	0.84	0.94	0.88	200	Weighted avg	0.98	0.97	0.98	200	[Insert screenshot] Import Set Run / Transform History with inserted, updated, ignored and error counts
	Pred. Imported	Pred. Rejected																																			
Actual Valid	186	4																																			
Actual Invalid	1	9																																			
Class	Precision	Recall	F1	Support																																	
Imported	0.99	0.98	0.99	190																																	
Rejected	0.69	0.90	0.78	10																																	
Macro avg	0.84	0.94	0.88	200																																	
Weighted avg	0.98	0.97	0.98	200																																	
2.	Tune the Model	Hyperparameter Tuning (Transform Map settings tuned): - Coalesce field set to the unique key (Employee ID / Email) so existing records update instead of duplicating. - onBefore script added to trim spaces, fix text case and convert date formats. - Choice and reference fields mapped through lookup values. - Mandatory fields and header row / sheet number checked in the Data Source. Result: accuracy improved from 94.5% to 97.5% on the 200-row validation sheet. Validation Method: Hold-out validation. The map was built and tuned on a 50-row sample sheet, then tested on a separate unseen 200-row sheet. Results were confirmed by comparing Import Set Run counts (inserted, updated, ignored, error) with the spreadsheet and spot-checking records in the target table.	[Insert screenshot] Transform Map settings (coalesce field, onBefore script) and validation run result																																		

This project is a data import (not a trained machine-learning model), so the metrics are adapted: the regression metrics compare spreadsheet values with stored values, and the classification metrics compare the expected outcome of each row (import or reject)

with what the Transform Map did. The figures are sample values; replace them with your own test results and screenshots before submitting.
