Define the Problem Statements

Date	02 October 2026
Team ID	6ab7f10630f9767f87728ca3
Project Name	Import Data Using Transform Maps (Spreadsheet)
Team Leader	E Dilli Kumar
Team Members	R Vinish, K Jerina, B Mohanavalli, P Sri Ragavan
Maximum Marks	2 Marks

Customer Problem Statement

A customer problem statement helps the team empathize with users and understand how they perceive the product or service. Below, the problem statements describe the challenges users face when importing spreadsheet data into ServiceNow tables using Transform Maps.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A system administrator managing records in ServiceNow	Import large volumes of employee/asset data from an Excel spreadsheet into a ServiceNow table	The spreadsheet columns do not match the target table fields and the import fails or loads wrong data	Field mappings between source and target are not defined or are configured incorrectly in the Transform Map	Frustrated and stressed, as I must fix data manually
PS-2	A data analyst / business user preparing data for the platform	Upload spreadsheet data and have values (dates, choices, references) converted to the correct format	Dates, reference fields and choice values are rejected or imported inconsistently	Source data formats differ from the target field types and no transform scripts or field rules are applied	Confused and worried about data quality and accuracy
PS-3	A developer / ServiceNow admin responsible for data integrity	Import data repeatedly without creating duplicate records or overwriting existing ones	Duplicate or incorrect records get created in the target table	No coalesce field is set, so the import cannot identify and update existing records	Annoyed and anxious about cleaning up duplicates

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-4	A team member who uploads data regularly	Track which spreadsheet rows were inserted, updated or skipped	I cannot easily find and understand the errors in the import	Import set rows and transform logs are hard to interpret, and there is no clear validation before loading	Uncertain and unproductive, with time wasted on re-uploads
