

Functional & Performance Testing Template

Model Performance Test

Date	04 October 2026
Team ID	6ab7f10630f9767f87728ca3
Project Name	Import Data Using Transform Maps (Spreadsheet)
Team Leader	E Dilli Kumar
Team Members	R Vinish, K Jerina, B Mohanavalli, P Sri Ragavan
Maximum Marks	

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Text Input Validation (e.g., Data Source name, Transform Map name, spreadsheet column headers)	Enter valid names and invalid ones (blank, special characters, duplicate names) in the Data Source / Transform Map form; load a sheet with correct and misspelt headers	Valid names accepted; errors shown for blank or duplicate names; mismatched headers flagged during field mapping	Valid names saved. Blank name rejected with a mandatory-field message. Misspelt header left unmapped and highlighted.	Pass
FT-02	Number Input Validation (e.g., Employee ID, quantity, row count)	Import numeric columns with valid values, out-of-range values and text in a number column	Valid numbers imported; out-of-range or non-numeric values skipped and logged as errors	Valid rows imported. Text in number column ignored and listed in the Import Set Run error log.	Pass
FT-03	Data Import & Transformation (spreadsheet to target table)	Upload the spreadsheet to the Data Source, load the data into the Import Set table, run the Transform Map	Records are created or updated in the target table with correct field values; coalesce prevents duplicates	200-row sheet processed: records inserted and updated correctly, no duplicate records created.	Pass
FT-04	Data Source / Instance Connection Check	Check the Data Source configuration (file attachment, format, sheet number, header row) and test the load	Data Source loads the file and returns the staged rows without error	File attached and loaded successfully; staged rows match the spreadsheet.	Pass
PT-01	Response Time Test	Use a timer to measure load plus transform time for a 200-row spreadsheet	Should be under 3 seconds	Average transform time about 2.1 seconds over 3 runs.	Pass
PT-02	Concurrent Import Speed Test	Run several import sets (transform runs) at the same time	Imports should not slow down noticeably or fail	5 simultaneous imports completed without errors; time increased only slightly.	Pass

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
PT-03	File Upload Load Test (multiple .xlsx / .csv files)	Upload multiple spreadsheets one after another and check processing	Should work smoothly without crashing	10 spreadsheets uploaded and processed with no crash or timeout.	Pass

The Actual Result entries and timings above are sample values written to match the project. Replace them with your own observed results (and change Pass/Fail if any test fails) before submitting.
