

User Acceptance Testing (UAT)

Date	05 October 2026
Team ID	6ab7f10630f9767f87728ca3
Project Name	Import Data Using Transform Maps (Spreadsheet)
Maximum Marks	[As per evaluation scheme]
Team Leader	E Dilli Kumar
Team Members	R Vinish, K Jerina, B Mohanavalli, P Sri Ragavan

1. Project Overview

Project Name	Import Data Using Transform Maps (Spreadsheet)
Project Description	Allows users to upload an Excel/CSV spreadsheet into a staging (import set) table and use a Transform Map to map source fields to the target table fields (with field mappings, coalesce, and transform scripts), so that records are inserted or updated correctly without manual data entry.
Project Version	1.0
Testing Period	28 September 2026 to 03 October 2026

2. Testing Scope

Features and functionalities tested:

- Creating the target table and its fields
- Creating the Import Set (staging) table from a spreadsheet
- Uploading an .xlsx / .csv data source
- Creating the Transform Map and field mappings
- Coalesce on a key field (insert vs. update)
- Running the transform and viewing Transform History
- Handling of invalid, empty, duplicate and wrong-format data

User stories / requirements tested:

- As an admin, I can upload a spreadsheet so that data is loaded into an import set table.
- As an admin, I can map spreadsheet columns to target table fields using a Transform Map.
- As an admin, I can avoid duplicates by coalescing on a unique field.
- As an admin, I can review the transform results and errors to confirm a successful import.

3. Testing Environment

URL / Location	ServiceNow Personal Developer Instance (<a href="https://<instance-name>.service-now.com">https://<instance-name>.service-now.com)
Credentials	Admin user of the team instance (username/password shared with the testers; not printed here for security)
Test Data	Sample spreadsheet (Sample_Data.xlsx) with columns such as Name, Email, Department, Phone

4. Test Cases

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Create target table (positive)	1. Go to System Definition > Tables. 2. Click New and enter label and name. 3. Add the required fields and Submit.	Table and fields are created successfully.	Table and fields created.	Pass
TC-002	Upload valid .xlsx file	1. Go to System Import Sets > Load Data. 2. Choose Create table, enter label. 3. Select the .xlsx file and sheet, click Submit.	Data is loaded into the import set (staging) table with all rows.	All rows loaded in staging table.	Pass
TC-003	Upload valid .csv file	1. Open Load Data. 2. Select the CSV file. 3. Submit.	CSV data is loaded into the staging table.	CSV data loaded.	Pass
TC-004	Upload unsupported file (negative)	1. Open Load Data. 2. Select a .pdf/.txt file. 3. Submit.	System rejects the file or shows an error; no data loaded.	Error shown; no data loaded.	Pass
TC-005	Create Transform Map	1. Open Create Transform Map from the import set. 2. Select the target table. 3. Save.	Transform Map is created, linking source and target tables.	Transform Map created.	Pass
TC-006	Auto-map / manual field mapping	1. Open Mapping Assist or Field Maps. 2. Map source columns to target fields. 3. Save.	All fields are mapped correctly.	Fields mapped correctly.	Pass
TC-007	Run transform with valid data	1. Open the Transform Map. 2. Click Transform. 3. Choose the Import Set and run.	Records inserted into target table; inserted count equals row count.	All records inserted.	Pass
TC-008	Coalesce on key field (update)	1. Enable Coalesce on Email field. 2. Change a value in the sheet and re-import. 3. Run transform.	Existing record is updated; no duplicate created.	Record updated; no duplicates.	Pass
TC-009	Duplicate rows without coalesce (negative)	1. Disable coalesce. 2. Import the same file twice. 3. Run transform.	Duplicate records are created (expected behaviour); coalesce recommended.	Duplicates created as expected.	Pass
TC-010	Empty / mandatory field blank (negative)	1. Leave a mandatory column blank in the sheet. 2. Upload and transform.	Row is skipped or flagged as error in Transform History.	Row flagged in history.	Pass
TC-011	Wrong data format (negative)	1. Enter text in a numeric/date column. 2. Upload and transform.	Row is ignored or error logged; other rows still import.	Error logged; others imported.	Pass
TC-012	Transform history / log check	1. Go to System Import Sets > Transform History. 2. Open the latest run.	Inserted, updated, ignored and error counts are displayed.	Counts displayed correctly.	Pass
TC-013	Verify data in target table	1. Open target table list view. 2. Compare with the spreadsheet.	Data in the table matches the spreadsheet.	Data matched.	Pass
TC-014	Large file import (performance)	1. Upload a sheet with 1000+ rows. 2. Run transform.	All rows are imported without timeout.	Imported in acceptable time.	Pass

Summary: Total test cases: 14 | Passed: 14 | Failed: 0

5. Bug Tracking

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback
BG-001	Column headers with spaces created inconsistent staging field names, so auto-mapping missed some fields.	1. Upload a sheet with headers like "First Name". 2. Open Mapping Assist. 3. Check unmapped fields.	Medium	Closed	Fixed by mapping fields manually / renaming headers without spaces.
BG-002	Duplicate records created when re-importing the same file.	1. Import the file. 2. Import it again with coalesce off. 3. Check target table.	High	Closed	Resolved by enabling coalesce on the unique Email field.
BG-003	Date column imported in wrong format.	1. Upload a sheet with dd/mm/yyyy dates. 2. Run transform. 3. Check date field.	Medium	Closed	Fixed with a transform script / correct date format in sheet.
BG-004	Blank mandatory field caused row to fail without a clear message.	1. Leave Name blank. 2. Run transform. 3. Open Transform History.	Low	Open	Suggest adding a validation script with a clearer error message.

6. Tester Feedback and Suggestions

- The import process is simple and saves significant manual data-entry time.
- Provide a downloadable spreadsheet template so column names are always consistent.
- Add clearer validation and error messages for blank or wrongly formatted data.
- Always set a coalesce field to prevent duplicate records.

7. Sign-off

Tester Name	Date	Signature
E Dilli Kumar (Team Leader)	03 October 2026	
R Vinish	03 October 2026	
K Jerina	03 October 2026

Project Manager			
Product Owner			

Notes:

- All test cases cover both positive and negative scenarios.
- Testers provided detailed feedback and suggestions for improvement.
- Bug tracking includes severity, status and steps to reproduce.
- Sign-off from both the project manager and product owner is required before deployment.
